

Amendment to the Claims:

The listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1-18. (Cancelled) Without disclaimer or prejudice.

Please insert new claims 19-33 as follows:

19. (New) A display arrangement for holding a liquid crystal display in a position relative to a housing including first and second housing parts comprising:

an elastic part located between the liquid crystal display and the second housing part, a cavity located between a periphery of the liquid crystal display and the first housing part, and an adhesive member applied along a periphery of a bottom surface of the liquid crystal display which attaches the liquid crystal display to the housing; and wherein

the first housing part covers the periphery and the bottom surface of the liquid crystal display and the second housing part covers a periphery of a top surface of the liquid crystal display.

20. (New) A display arrangement according to claim 19 wherein:

the elastic part surrounds an inner periphery of the second housing part.

21. (New) A display arrangement according to claim 20 wherein:
the elastic part is flexible and is located on the second housing part
to provide pressure on the liquid crystal display and provide a dust-proof seal
between the liquid crystal display and the housing.
22. (New) A display arrangement according to claim 19 comprising:
a side connector to the printed circuit board located on a side of the liquid
crystal display.
23. (New) A display arrangement according to claim 20 comprising:
a side connector to the printed circuit board located on a side of the liquid
crystal display.
24. (New) A display arrangement according to claim 21 comprising:
a side connector to the printed circuit board located on a side of the liquid
crystal display.
25. (New) A communication terminal, comprising:
a display arrangement according to claim 19.
26. (New) A communication terminal, comprising:
a display arrangement according to claim 20.

Contd

27. (New) A communication terminal, comprising:
a display arrangement according to claim 21.

28. (New) A communication terminal, comprising:
a display arrangement according to claim 22.

29. (New) A communication terminal, comprising:
a display arrangement according to claim 23.

30. (New) A communication terminal, comprising:
a display arrangement according to claim 24.

31. (New) A method for arranging a liquid crystal display in relation to a housing including first and second housing parts in an electronic equipment comprising:

applying an adhesive member along a periphery of a bottom surface of the liquid crystal display and attaching the liquid crystal display with the adhesive member to the first housing part, mounting the second housing part to cover a periphery of a top surface of the liquid crystal display with an elastic member located between the second part and a top surface of the liquid crystal display and wherein the elastic member establishes a pressure on the top surface of the liquid crystal display which retains the relative position between the liquid crystal display and the housing parts.

Continued

32. (New) A method for establishing a flexible display arrangement, comprising:

attaching a liquid crystal display to a housing including first and second housing parts wherein the first housing part covers a periphery of the liquid crystal display and a bottom surface of the liquid crystal display and the second housing part covers a periphery of a top surface of the liquid crystal display with an adhesive member located along a periphery of the bottom surface of the liquid crystal display with the housing including a cavity located between side walls of the housing and a side periphery of the liquid crystal display; and

applying an elastic member between a top surface of the liquid crystal display and the second part of the housing.

33. (New) A method according to claim 32 wherein:

the liquid crystal display is attached to a first housing part with the adhesive member, and the second housing part and the elastic member surrounds an inner periphery of the second housing part with the elastic member applying a retaining force on a top surface of the liquid crystal display.
